Functions

We have seen some functions already!

<u>Three parts</u>

1. Prototype declaration
2. Function call
3. Function definition.

Eg :

wall ⟹ scope

```
int add ( int x, int y );          int add (int x, int y)
                                    {
int main ( ) {                          int s = x + y;
                                        return s;
    int n1 = 10, n2 = 20;           }

    int s ;
    s = add ( n1, n2 );
    printf ( "%d" , s);
}
```
